

SEF2405 & SEF2410

The photocells from ERONE provide a range of active infrared beams which will activate if the beam is cut between the transmitter at one end and receiver at the other.

The range includes models of varying beam lengths, and the option of a vandal resistant casing. Active infrared beams are ideal for protecting the active zone on swing and sliding gates and doors, to prevent injury or accidental damage if a person/obstacle is within the zone. Also used as signalling devices where the beam is interrupted by vehicles or pedestrians, and as a guard for machinery which can be stopped automatically if a person approaches the machine.

The 5 and 10 metre flat photocells have fixed optics, and are ideal for discreet mounting.

Overview

- Active infrared photocells
- Easy to install
- Flat models for discreet mounting
- 5 and 10 metre ranges
- Internal or external use
- 2 year warranty

SEF2405/10 - Technical Specifications

Product Specifications

Range: 5m (SEF2405) or 10m (SEF2410)
Optics: fixed
IP Rating: IP55

Electrical Specifications

Voltage: 12-24Vac/dc

Dimensions

Dimensions: 90 x 60 x 22mm
